THESIS PROPOSAL

Title:

Cunene River: A sleeping monster for wellbeing

Introduction

Complete Step

Introduction

The Cunene River is in Cunene Province, the southernmost province of the country, bordering Namibe Province, Huila, Cuando Cubango and the Republic of Namibia.

The river in reference has its flow extended from the Province of Huila to the Atlantic Ocean where it flows.

This river represents a great wealth for tourism, agriculture, animal and forest biodiversity, fertile land, sites for development of cities and everything else that a river can offer.

In our study, we will explore in depth what we can appreciate from the river for the well-being of the people of Cunene, southern Angola, the country in general, and what it can offer as a resource to neighboring countries, especially Namibia.

Description

The need is to elaborate a study that serves as a reference for the rapid growth and development of the economic, social, political, agricultural, livestock, tourism, and strategic potentialities that are hidden in a single river that has not been leveraged by a people that has seen the water go by for thousands of years and suffers a lot even from hunger problems, a consequence of the spiritual poverty and the little intellectual performance that these people have to wait for rainy weather to eat a little bit of marzipan, which often does not happen because there are years that it does not rain. Thus, creating a solution that is permanent and does not depend only on natural factors.

General Analysis

Complete Step

General Analysis

In order to break the habit rooted in the population of waiting nine months for the rain to work only three months a year and spend the rest of the time in pastoralism and entertainment with a few people who buy products in the Republic of Namibia, in the provinces of Huila, Namibe and other provinces of Angola to end the food reserves of the population with commercial exchanges, we will bring solutions that will lead the people to create food reserves and create wealth in view of a cultural environment and tourist entertainment more sharp with human development guaranteed with the solutions of social and industrial infrastructure rigorously implemented.

Current Information

Complete Step

Current Information

The work that I am going to formulate aims to answer a series of questions that have been asked by a good part of the population of Cunene and others who with great pain see the people of Cunene going through a great food shortage and poor human development as:

- Analyze what has been at the root of the food deterioration of the indigenous people of Cunene from 1991 to 2022.
- To survey the direct and indirect benefits that the development of the Cunene River can bring to the social and economic stability of the province.
- Outline an empirical study comparing with other world pole realities to leverage the growth and development of the province.
- Create a scenario of cereal production every three months, culture of fruits, vegetables and animals to produce meat, milk, poultry and other animal derivatives.
- Create a processing industry on site that can absorb the products coming from the production of these sites to ensure their conservation for a longer period.
- Develop tourism and create new towns along the irrigated perimeter of the riverbank.
- To create schools that guarantee the development of children, youth and communities in the general area.
- Compare the values harnessed by the flow in the Republic of Namibia and bring as knowledge to develop in Angola.
- Reduce the importation of food from the Republic of Namibia and replace it with local production.
- Bring an environment of greater happiness for the people and allow the collection of foreign exchange with the export of basic foods.

Discussion

The goal is to create strategy and actions that aim to develop a scientific approach to the macroeconomic and social development of a river that God by his infinite goodness created, and to respond positively instead of the people continuing to starve with a sublime opportunity to catapult its natural wealth and create an ambit of wealth and integral development for future generations. Another substitute title might be, "what drives man to starve with such a great river between them carrying water to the sea?"

Conclusion

Complete Step

Conclusion

Finally, we believe that this issue, once digested, will serve as leverage for the development of policies conducive to the integral development of our population and the end of a long historical period of begging that the people of Cunene have suffered due to the great rainfall shortages that cyclically occur in our territory.

This is also a reflection that can be taken to the governing apparatus to create long-term solutions instead of palliative solutions that lead the people to suffer the same problems repeatedly.

It will allow us to have a Cunene turned towards development and never again think only of the belly, other horizons will open for the depleted people of Cunene.

This study will also be associated with the interest of Non-Governmental Organizations and or other world organizations that feel challenged to participate in this race for growth that is expected to create along the sleeping monster Cunene River.
